Projects

SignBridge – Indian Sign Language Translator  GitHub [Demo](#)

- Developed a full-stack ISL translation application supporting Text-to-Sign, Sign-to-Text, and interactive learning modules using TensorFlow, OpenCV, and speech recognition.
- Built a real-time gesture recognition pipeline with webcam streaming and CNN-based classification, achieving 92% translation accuracy for Indian Sign Language.

Blog Platform  GitHub [Demo](#)

- Developed a backend blog/notes platform using Node.js, Express, MongoDB, and Mongoose with secure JWT authentication and bcryptjs password hashing, enabling user signup/login and protected profile access.
- Designed modular RESTful APIs and structured the application with routes, models, and middleware to support user-specific CRUD operations for blogs/notes with efficient data persistence.

To-Do List  GitHub [Demo](#)

- Built a full-stack task management web application using Django with secure user authentication, registration, and SQLite-based data persistence.
- Implemented complete CRUD functionality with a responsive frontend using HTML, CSS, and JavaScript following Django MVC architecture.
